

5

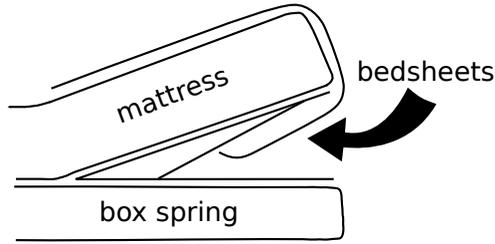

To Use

1 Just lift!

The foot stand drops into place with a click, holding the mattress up. If you do not hear a click, lift higher. Keep your hand at the edge; no need to reach under the mattress.

2 Make the bed and tuck the sheets in between the upper and lower plates of the BedMaker.

Remember, the BedMaker stays on the bed, so you don't have to remove it. Tuck the sheets right into it, then close it as in step 6.

Caution

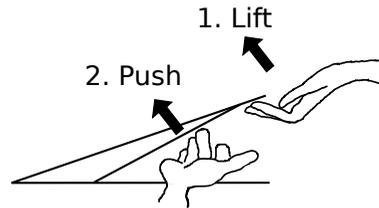

Take care not to pinch fingers in the device. Keep fingers flat and operate from edge of bed; do not reach far under mattress. Liability limited to purchase price of product. Load limit of 50 lbs; not designed to sit or lean on. Not responsible for breakage due to application of weight in excess of limit.

6

Close the BedMaker

IMPORTANT: You must lift the top plate slightly before collapsing the BedMaker, to take the weight of the mattress off the foot stand and allow it to come out of the slot.

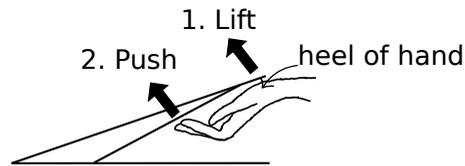

Method 1: With two hands

Lower into closed position.

Method 2: With one hand

With palm facing up, lift with heel of hand, and close with fingertips.

Lower into closed position.

Leave the BedMaker on the bed, ready for the next use.

Additional Notes

What if you have a bed skirt?

If you have a bed skirt that covers the surface of the box spring with fabric, it helps to pin it down right where the BedMakers sit. Otherwise, even if you stick the BedMaker to the the bed skirt, both can still ride up and slide around, since the bed skirt is not attached to anything. Bed skirt pins work well for this (links on website). Other options are to remove the bed skirt altogether, or replace it with a wrap-around model that does not cover the surface of the bed base (links on website).

What if there is a rim around the bed frame?

This is no problem. Place the BedMakers at the corners to give your hand the most room to slide in past the rim. Optionally, if the rim is very deep, adding a box spring can elevate the mattress for easier access.

Should you put the BedMaker over or under the mattress protector?

It's up to you, but if you don't change the mattress protector often, you can leave it outside the BedMaker. Let the mattress protector remain above the top plate of the BedMaker, hugging the mattress.

The BedMaker™

Holds the mattress up

...while you change the sheets.

Instructions for Use

Patent Pending

The BedMaker™

Congratulations on purchasing the BedMaker! With this tool you will never struggle with a heavy mattress again.

1

Try it out!

When you open the package, take out one BedMaker and try it out in your hand. Remove the elastic band (carefully due to the spring), and open the BedMaker. Notice how the foot stand "clicks" into the slot. Push it back out of the slot again to close it.

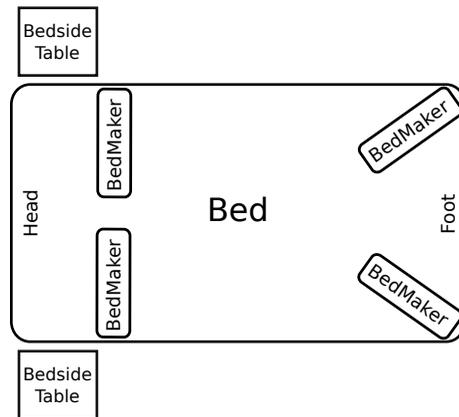

Now let's place it on a bed.

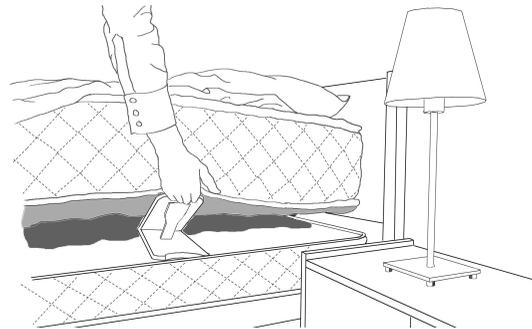

2

Decide on location

BedMakers can be placed anywhere along the edge of the bed frame. A practical configuration is with the two bottom BedMakers angled diagonally at the corners, and the two top BedMakers placed horizontally on the side of the bed, just in front of any bedside tables.

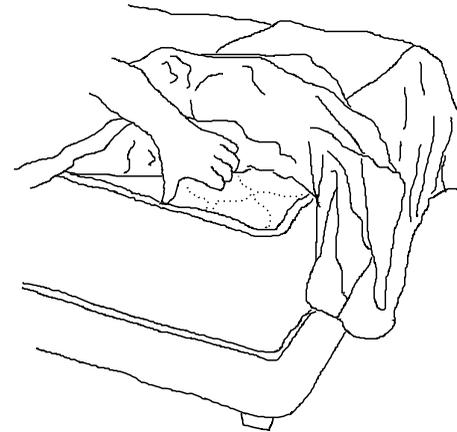

The hinges of the BedMakers face inward towards the center of the bed, with the gap opening at the edge of the bed.

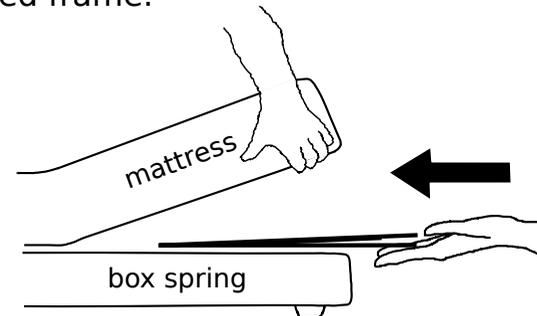

3

Place on bed

Pull back the bedsheets to expose the bare mattress or mattress protector.

Slide the closed BedMaker in between the mattress and box spring. Rest the back (hinge end) across a solid part of the bed base, such as a slat, and the front on or near the edge of the bed frame.

Try it out a few times to ensure it's resting solidly, then stick it down with the adhesive pads (step 4).

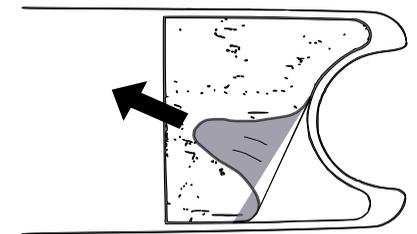

4

Stick down

IMPORTANT: Stick each BedMaker down using its adhesive pad. **Do not skip this step!** It keeps the BedMaker from sliding around under the mattress, and helps the foot stand engage properly in the slot.

Note: If you have a bed skirt, pin it down now, before sticking the BedMakers to it. See details on reverse side.

Remove the backing paper from the adhesive pad, and press the BedMaker firmly down onto the base of the bed, contacting as much of a slat, rung, or solid part of the bed base as possible.

The pads have a velcro layer - this is so that you can remove the BedMaker if needed, without pulling off the adhesive. This can be useful when moving the bed frame to a new room or house, for example. But most of the time you just leave the velcro stuck together.
